Flexible, empathetic, communicative, and skilled developer with a passion for programming

`// README`

My name is Zach, aka sneaky crow. I've been programming since I was about 12 years old. To this day, programming exists as one of my favorite hobbies. I love exploring it and learning new skills.

Through personal and professional means, I've learned many languages, frameworks, integrations, and much more. I do my best to focus more on conceptually understanding systems, which lends me flexibility with approaches.

I understand the various layers of application development, including coding it, documenting it, deploying it, and communicating it. I can develop backend systems just as well as I can develop advanced frontend applications.

You'll find that my flexibility, experience, and, most important, my ability to communicate well makes me an excellent boon for your team.

`$ git log`

Founder & Software Engineer
Sneaky Crow, LLC

Sole developer and business owner, primary developing web applications for small online businesses
Mar 2021 - Present

- Developed web applications and services using languages such as **JS** (**Next.js**, **React**, **Node**), **Rust**, **Go**, and **SQL**
